FV1000 SIM Scanner System

Laser for stimulation

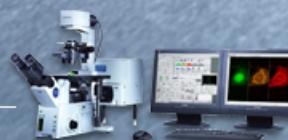

Galvanometer scanning mirror for stimulation

Laser for imaging

Galvanometer scanning mirror for imaging

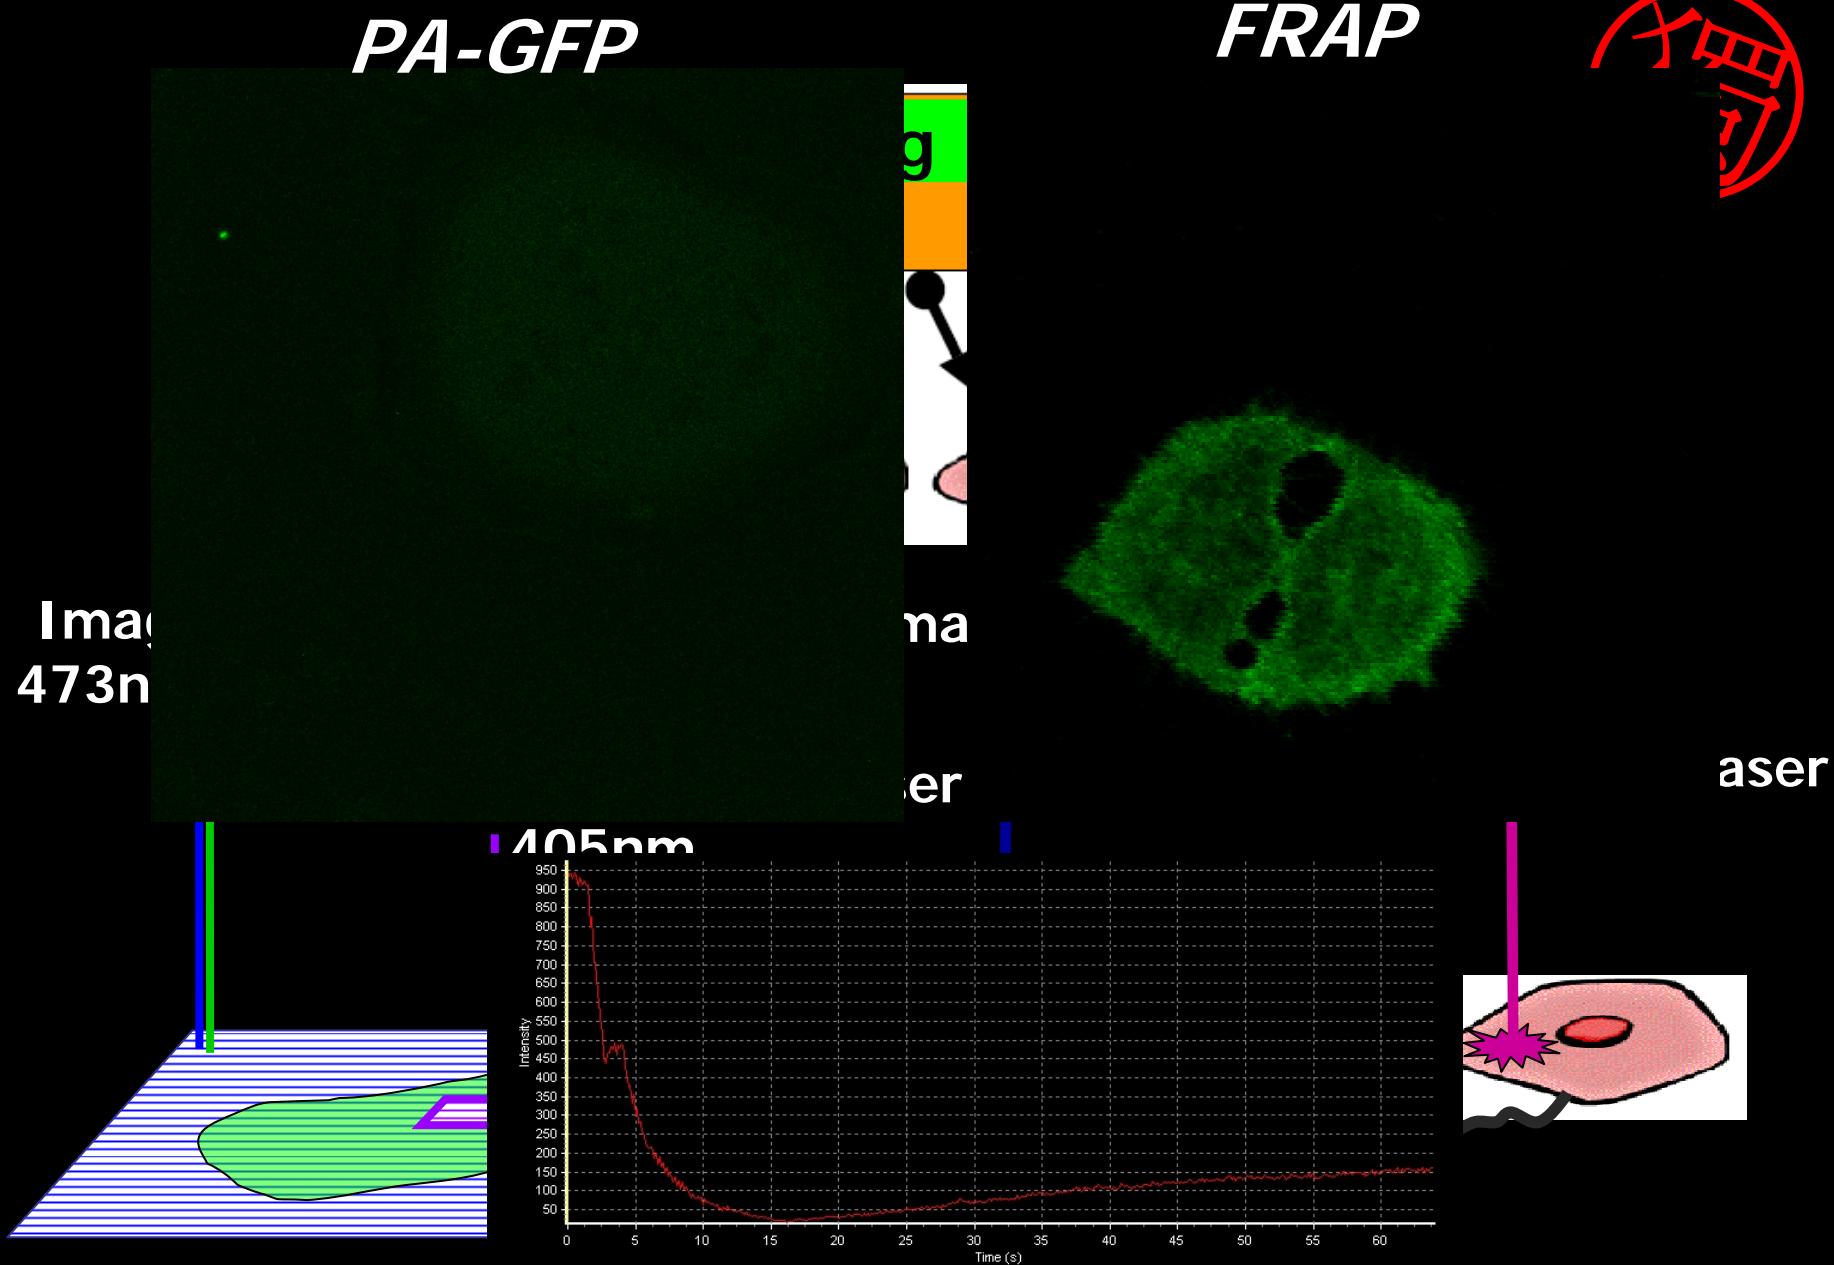

- SIM scanner can be incorporated into both spectral and filter types.
- Laser for stimulation cannot be used for imaging.

*ROI*

一般的ROI scan方法會有多餘的掃描範圍，效率較差

OLYMPUS 獨有的Tornado scan可以更有效率的方式進行FRAP以及FLIP等活細胞實驗,避免細胞光毒害

# Reliable colocalization

# DMP

- Measure molecular size
  - Molecules diffuse even in solution or cells

Stokes-Einstein

$$D = \frac{k_B T}{6\pi\eta R_h}$$

D : diffusion constant

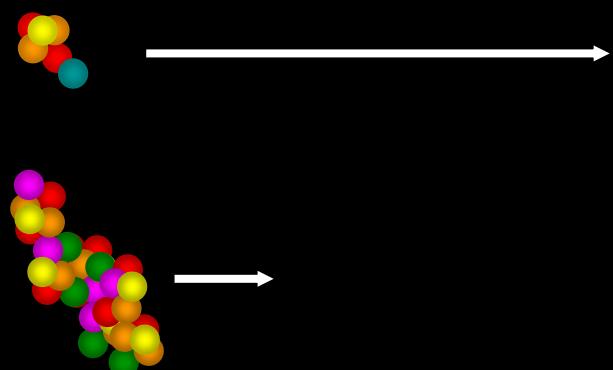

kB : Boltzmann constant

T : temperature     $\eta$  : viscosity

R<sub>h</sub> : radius

Able to measure the size of molecules  
by Diffusion constant
